

Bears to Barnacles:

Incredible Animals of the Salish Sea

Monday April 15, 2013

6:30 to 8:30 PM

LOTT's WET Science Center

500 Adams St. NE

Olympia, WA 98501

The largest octopus. The biggest barnacle. The most enormous anemone.

Come hear about some of the biggest, longest lived and most unusual animals in the Salish Sea when Joe Gaydos, wildlife veterinarian and chief scientist of the SeaDoc Society, speaks on the web of life in our coastal ecosystem. In this entertaining presentation you'll also hear about the unexpected connections between land and sea that Joe Gaydos and collaborators uncovered in their recent landmark compilation of all the birds and mammals of the Salish Sea. You'll never look out over the water the same way again.

This is a FREE event but space is limited.

**Reserve your space today and find out more at
